Santiago de Surco, Lima – Perú

About me:

I'm a philosopher turned into a software developer. I've been coding since I was a little kid, making small programs to assist me while playing video games. Now, my passion for philosophy led me to logic which then conducted me into algorithms and data structures. After revisiting the fundamentals, I decided to focus on Front-End developing as I figured that I love developing applications (both on mobile and web) and building things that users can interact with in an intuitive and simple way.

Skills:

Front-End: HTML, CSS, SASS/SCSS, JavaScript, WordPress, XAML
Back-End: Node.js, C#, VBA
Frameworks: React, React Native, Express, TailwindCSS
Others: Git, SQL

Work Experience:

Programmer: UR Business Solutions   Lima, Perú
February 2019 - Now

I designed, developed and deployed multiple projects for the Human Management area in multiple enterprises. This included meetings with clients to gather requirements, monitoring project progress and developing multiple solutions (in both front-end and back-end fronts). I was also in charge of preparing user manuals, training sessions and service support.

Teaching Assistant: Pontificia Universidad Católica del Perú   Lima, Perú
April 2012 - December 2019

As a TA, I focused on preparing lectures and evaluations for the classes of Logic (2013 - 2019), Ancient Philosophy (2012 - 2016) and Science & Philosophy (2013 - 2014). I was also entrusted with the title of Teaching Assistant Coordinator for the class of Logic which entailed organizing work meetings with the other TAs, discussing class related topics with teachers and supervising the TA admitting contest.

Education:

Pontificia Universidad Católica del Perú   Lima, Perú
2008 - 2012

Bachelor of Arts in Letters and Human Sciences with mention in Philosophy.
